Claim Rejections - 35 USC § 112

1. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim language is vague and indefinite as the term "per m²" is a two dimensional unit, since applicant is claiming number of pores with a diameter, should it be claimed in per m³ bases? Clarification is required.

Claim Rejections - 35 USC § 102/103

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Ketcham (US 5338598).

Ketcham discloses a composite article comprised of a sintered polycrystalline ceramic reinforcing component and a matrix (col 2 L 46-51).

Art Unit: 1775

The reinforcement component is a powdered crystalline ceramic material. The matrix is a powder or a mixture of powders and an organic vehicle (col 2 L 58-68).

The composite article has zero open porosity (col 3 L 41-45). The sinterable polycrystalline ceramic may be a nitride or an oxide material (col 5 L 1-4).

The composite is used as an electrically insulating substrate for integrated circuits (col 11 L 67-68).

Ketcham is silent about the number of pores and the pores' diameters, but Ketcham's ceramic composite has zero open porosity which means that there is no pore exists and that would meet the claimed invention.
